May	15	Ascension day	May	25
May	25	Whitsunday	June	4
Novem.	30	Advent-sunday	Decemb.	3

A breviate of the foure termes of law.

THe first of *Hilarie* Term shall be
On *Januarie* the twentie three:
And on the twelfth of *February*
This Term doth end most certainly.
And *Easter* Term from *Easter* day,
The wednesday fortnight 'gins alway,
And when th' *Ascension* day is past,
Till monday next this Term doth last.

On Friday after *Trinitie*
This Term begins assuredly:
And as our Lawyers all do write,
It ends the wednesday fortnight.
If *Michaelmas* Term you seek to find,
The ninth of *October* beare in mind:
It ends as I doe well remember,
The twentie eight day of *November*.

Short lines Termes commence end
be the of and ing.
Long times cares, turmoyles, spend

Is there not a wise man amongst you?

UNIVERSITY LIBRARY CAMBRIDGE

Of yeares, moneths, weeks, and dayes.

The Julian yeare beginneth the first of January
The Gregorian begins the 22 of our Decemb.
The church of England, in law-cases, March 25
The yeare of the kings reigne, March 27.
The state of Florence, Sienes, and Pisa, March 25
The Empire (as the Julian) the first of January
The church of Rome, on their 25 of December
The Egyptians and Persians the 18 of our July
} and containeth 365 dayes.

The Arabians, and most people of Asia, September 13
The Hebrews, Greeks, Sarazens, and Turks, 12 mon. Lunar

The Tropicall (or true Solar yeare) beginneth at the Vernall equinox, and contains 365 dayes, 5 hour. 50 min.

The Sydereall or starry yeare, beginneth when the sunne is with the first starre of Aries, of 365 dayes, 6 hour. 6 min.

Of moneths.

The moneth
- Solar, is the continuance of the sunne in one signe.
- Of Apparition, is 28 dayes, or foure weeks.
- Of Paragration, is 27 dayes and 8 houres.
- Of Consecution, is from new moon to new moon.
- For use of money, is according to the kalender.

Of a week.

A week hath the name in latine Septimana, or seven mornings; yet we commonly call it 7 nights; or in brief, a seanight.

The week beginneth on sunday morning, about midnight; so that our sunday is the first day of the week, called Dies Dominicus, the Lords day.

Of a day.

A day Artificiall is the time betwixt sunne-rising and sunne-setting; and the night from sunne-set to sunne-rise.

A day naturall is the time of 24 houres, the beginning whereof [illegible]rth us in England & the Romanes, is at midnight

The Athenians at sun-setting. The Babylonians at sun-
omers at noon. rising. The Umbrians and Astron-

January hath xxxi dayes.

The description of the foure Quarters *of this present Yeare* 1633.

First of the Winter Quarter.

The winter quarter (according to the motion of the sunne) began the eleventh day of December, in the last yeare, viz. 1632. At which time the sunne entred into the first minute of Capricorn, he being then in his greatest south declination from the equinoctiall line, viz. 23 degrees and one half: being also then 47 degrees more southernly from us, then he will be the eleventh day of June next ensuing: by reason whereof, the dayes artificiall, viz. from sunne-rising to sunne-setting, with us will then be at the longest, which now are at the shortest. And of what length our night now is, of the same length shall our day then be that is, to us at Cambridge 16 houres and 24 minutes. And to those at Edenborough in Scotland, the same day is seventeen houres, and two third parts of an houre, viz. seventeen houres, and 40 minutes.

This quarter continueth untill the tenth day of March, the sunne, during this time, having his naturall motion in passing through these three signes, Capricorn, Aquarius, and Pisces.

In the which time, continuing the space of 89 dayes, 56 minutes, the length of the day with us will be increased 4 houres 24 minutes; and to the 11 of June 9 houres 8 minutes: which (by an equall division of this quarter) giveth for every 22 dayes and a quarter, the dayes increase to be one houre, which the vulgar people accompt 15 dayes to one houre. But (by reason of the obliquitie of the ecliptique, the motion of the sunne, and chiefly the great obliquity of the whole spheare, in this our latitude of 52 degrees and

17 minutes) the increase of the length of the dayes is as followeth, that is,

From the eleventh of December to the 15 of January, containing 34 dayes, the day is increased one houre.

From the 15 of January to the second of February, containing 18 dayes, the day is increased one houre.

From the second of February to the seventeenth, containg 15 dayes, the day is increased one houre.

From the 17 of February to the third of March, containing 14 dayes, the day is increased one houre.

From the third of March to the 19, containing sixteen dayes, the dayes increase one houre.

From the 19 of March to the third of April, containing 16 dayes, the dayes increase one houre.

From the third of April to the 19, containing 16 dayes, the dayes increase one houre.

From the 19 of April to the 7 of May, containing 18 dayes, the dayes increase one houre.

And from the seventh of May to the 8 of June, containing 33 dayes, the dayes increase one houre. Whatsoever further you desire for the length of every day, with the time of sun-rise and set, you shall finde in the Kalender without respect of the refraction of the sunne, which is different both for time and place: therefore here I willingly omit it.

The Spring Quarter.

The tenth day of March the sunne entreth into the first point of the ecliptique, being the same point which crosseth the equator, then making twelve houres day, and twelve houres night throughout the world. And this time is accounted to be the beginning of our Spring; from which time until the 13 of September, the dayes are longer then the nights: yet this quarter continueth no longer then the dayes are increasing in length, viz. untill the 11 day of June. This quarter continueth the time of the sunnes pro-

gresse

greſſe through theſe three ſignes, viz. Aries, Taurus, and Gemini, containing the ſpace of 92 dayes, 3 houres, and 59 minutes: which is foure dayes, three houres, and three minutes longer then the winter quarter.

The Summer Quarter.

The eleventh day of June, the ſunne entreth into the firſt ſolſtitiall point of Cancer, beginning then our ſummer, cauſing then the fruits of the earth to grow towards their ripening. And this is to all thoſe that inhabite on the northſide of the equinoctiall line, their longeſt artificiall day; and to all on the ſouthſide, their ſhorteſt day.

This quarter continueth untill the 13 day of September, during which time, the ſunne declineth towards the Equator, which is the time of the ſunne his period through theſe three ſignes, Cancer, Leo, Virgo, containing the ſpace of 93 dayes, 14 houres, and 25 minutes. Which is 4 dayes, 13 houres, and 29 minutes longer then the winter quarter, and 10 houres 16 minutes longer then the ſpring quarter.

The Autumnall Quarter.

The 13 day of September, the ſunne entreth into the autumnall Equinoctiall point, making again the day and night artificiall of one equall length.

This quarter continueth untill the 11 day of December, the ſunne declining to his ſouthern Tropique; in which time, containing 89 dayes, 10 houres, and 56 minutes, he moveth through Libra, Scorpio, and Sagittarius.

The use of those numbers in the 7 *columne or space in this Almanack, in every* moneth of this yeare 1633.

IN the seventh columne (or space) in every moneth in this Almanack you shall finde the houre and minute of the sunne-setting for every day. The use is thus: Double the houres and minutes of the sunnes setting, and you have the length of the same day. Again, take the houres and minutes of the sunnes setting out of twelve houres, and that which remaineth is the time of sun-rising: which being doubled is the length of the same night.

So have you { The length of the day / The length of the night } every day in the { The time of Sun-rise / The time of Sun-set } yeare.

Observe this plain and generall rule,

As { many minutes the Sunne { riseth before 4,5,6,7,8,9 / setteth after 8,7,6,5,4,3 }
So }

And so the contrarie: for,

As { many minutes the Sunne { setteth after 3,4,5,6,7,8 / riseth before 9,8,7,6,5,4 }
So }

which two numbers of sun-rise, and sun-set, make 12 hour.

When the Day is	8	9	10	11	12	13	14	15	16	hour. long.
Then the Night	16	15	14	13	12	11	10	9	8	

And so contrarie: for the length of day and night make 24 ho.

Concerning the minutes, remember this alwaies, that

Threescore	minutes do make	one houre.
Fortifive		three quarters.
Fortie		two third parts.
Thirtie		half an houre.
Twentie		one third part.
Fifteen		one quarter.

These are so plain, that example needeth not.

Of

¶ Of elections medicinall.

The body of man is daily subject to diseases and infirmities, and requireth great care and diligence to be had in conserving and keeping the health thereof. Therefore have I set down these principall rules for bleeding, purging, bathing, and sweating, wishing they may be used as necessity requireth; especially, upon such dayes as (according to their severall administrations) are noted in these rules of election following.

In { Bleeding, Purging, Bathing, Sweating } consider if you minister { to keep health, to cure diseases,

First, if to keep the bodie in health, then

Respect the state of the bodie for these 4 things,
- 1 Age { Youth. / Mans-state. / Age. / Decrepite age.
- 2 Complexion { Hot and dry. / Hot and moist. / Cold and dry. / Cold & moist.
- 3 Constitution { Grosnes: / Leannes.
- 4 Time of the yeare { Spring, best. / harvest mean. / Summer too hot. / Wint. too cold

Bleed from the age of { 12–24 / 24–36 / 36–48 } to { 24–36 / 36–48 / 48–60 } yeare, the { 1 / 2 / 3 / 4 } quarter. { Sanguine, in ♈. / Cholerick, in ♉ ♌. / Flegmatick, in ♍ ♐. / Melancholy, in ♎ ♑ ♒ ♓ }

The bodie very grosse, or very lean, bleed not.

¶ To order the bodie before bleeding.

A preparative to direct the humours, (by the counsel of a Physician) ought to be received three times at the least before a vein be opened: but if time do not permit this, then a glister would be used the night before. And then open a vein in the morning fasting, an houre or two after sunne-rising, and draw such a quantity as shall be thought fit by a skilfull physician.

Respect also must be had to these quantities of bloud, according to the complexions of the Patients: viz.

Those that are { Melancholique, Sanguine, Cholerick, Phlegmatique } may bleed { most of all. lesse then they. lesser. least of all.

After bleeding may be permitted a draught of clarret wine with a toste: and use meats of a light digestion untill the third day, during which time,

Refrain from { Riding. Leaping. Wrestling. Tennis. Bathing. } and { Running. Vaulting. Fencing. Bouling. Venus. }

¶ To order the Bodie that shall purge.

Let the Patient receive a preparative (according as the nature of the humours to be purged shall require) three, foure, or five dayes before he purge: and not walk into the aire upon the day of purging, untill the medicine have wrought the full operation.

¶ To order the Body after purging.

This is left to the skilfull opinion of him that ministreth; for sometimes the body falleth into a strange Symptoma; therefore the Physician ought not to be absent, untill he be sure that all dangers are past.

¶ Of Bathing.

The moon in { Libra, or Pisces, bath for cleanlinesse. Aries, Leo, or Sagit. bath grosse bodies. Cancer, Scorpio, or Pisces, bath dry bodies.

After bathing dry the body with hot clothes, and lie in a bed with clean sheets an houre or two.

¶ Of Sweating.

Use the same order as in bathing, &c.

Secondly

Secondly, if the body require medicine to cure diseases, then consider these rules following, viz.

In the body, the { Age / Complexion / Strength } of the sick patient.

In the disease, the { Beginning / Augmentation / State present / Declination } either { universall. / particular.

Also consider the { Nature of the disease to be cured. / Quality of the medicine that cureth. / Operation manuall and externall. / Ministration medicinall and internall

These and such like duly observed, then proceed according to art; as time will permit, the disease require, and the body endure.

Not waiting for the chosen { moneths / dayes / houres } lest delay cause further perill.

Alwayes remembring that you give no purging medicine when the moon is in Leo: nor open a vein, or make incision, when the moon is in the signe that ruleth over that member where that operation is to be done.

Elections of Husbandry.

Plant and graft the moon increasing in Taurus, or Aquar.
Fell Timber from Lammas till Christmas,) increasing
Fell Coppice and Fewell, the moon in the first Quarter.
Cut your vines, in February or March.
Geld cattell, the moon in Aries, Sagittarius, or Capricorn.
Remove trees, the moon in the last quarter of November.
Shear sheep, and cut haire, the moon increasing.
Gather Fruit, Herbs, and Flowers, at the Full moon.
The winde being east or north-east, it is not good to plant, to graft, or cut any trees or plants, whereof you expect any good.

¶ A plain description of the high-waies in *England* and *Wales*, now the second time enlarged, in a more perfect manner then heretofore hath been published, with the *use of the same by example, viz.*

From *Cambridge* to *London* 44 miles, thus accounted:

¶ From *Cambridge* to *Fulmire* 6 miles, from *Fulmire* to *Barkway* 6 miles, from *Barkway* to *Puckridge* 7 miles, from *Puckridge* to *Ware* 5 miles, from *Ware* to *Waltham* 8 miles, from *Waltham* to *London* 12 miles. And the next numbers do shew how farre it is from any of those townes (by the way) to *London*. As from *Fulmire* to *London* 38 miles, from *Barkway* 32, from *Puckridge* 25, from *Ware* 20, and from *Waltham* 12 miles. The same order holdeth throughout these tables
